QUESTION 1

The following table shows the results of a survey of 100 people who were asked to rate their satisfaction with their current job on a scale of 1 to 5, where 1 is "Very Dissatisfied" and 5 is "Very Satisfied".

Rating	Frequency	Percentage
1 (Very Dissatisfied)	10	10%
2 (Dissatisfied)	20	20%
3 (Neutral)	30	30%
4 (Satisfied)	25	25%
5 (Very Satisfied)	15	15%

Based on the data above, which of the following statements is true?

QUESTION 1: The following table shows the results of a survey of 100 people who were asked to rate their satisfaction with their current job on a scale of 1 to 5, where 1 is "Very Dissatisfied" and 5 is "Very Satisfied".

DECLARATION

I, _____

do hereby declare that _____

24. **Notes**

1. **Identify the main idea or topic of the passage.**
 2. **Identify the supporting details or evidence.**
 3. **Identify the author's purpose or tone.**
 4. **Identify the main characters or subjects.**
 5. **Identify the main events or actions.**
 6. **Identify the main conclusion or result.**
 7. **Identify the main problem or conflict.**
 8. **Identify the main solution or resolution.**
 9. **Identify the main theme or message.**
 10. **Identify the main point or argument.**

100

1. The first step is to identify the problem or question that needs to be addressed. This involves understanding the context and the specific requirements of the task.

1. **Identify the main idea or thesis statement.**
 2. **Summarize the supporting points.**
 3. **Identify the evidence used.**
 4. **Identify the conclusion.**
 5. **Identify the author's purpose.**
 6. **Identify the audience.**
 7. **Identify the tone.**
 8. **Identify the style.**
 9. **Identify the structure.**
 10. **Identify the language.**

1. **Introduction**
 2. **Background**
 3. **Methodology**
 4. **Results**
 5. **Conclusion**
 6. **References**

1. **Identify the main idea or topic of the passage.**
 2. **Read the passage carefully, paying attention to details.**
 3. **Underline key words and phrases that support the main idea.**
 4. **Summarize the passage in your own words.**
 5. **Answer the questions based on the information provided in the passage.**

1000

the first of these is the fact that the data are not normally distributed. This is a problem because the standard statistical tests assume normality. The second problem is that the data are not independent. This is a problem because the standard statistical tests assume independence.

The third problem is that the data are not stationary. This is a problem because the standard statistical tests assume stationarity. The fourth problem is that the data are not homogeneous. This is a problem because the standard statistical tests assume homogeneity.

The fifth problem is that the data are not normally distributed. This is a problem because the standard statistical tests assume normality. The sixth problem is that the data are not independent. This is a problem because the standard statistical tests assume independence.

The seventh problem is that the data are not stationary. This is a problem because the standard statistical tests assume stationarity. The eighth problem is that the data are not homogeneous. This is a problem because the standard statistical tests assume homogeneity.

The ninth problem is that the data are not normally distributed. This is a problem because the standard statistical tests assume normality. The tenth problem is that the data are not independent. This is a problem because the standard statistical tests assume independence.

The eleventh problem is that the data are not stationary. This is a problem because the standard statistical tests assume stationarity. The twelfth problem is that the data are not homogeneous. This is a problem because the standard statistical tests assume homogeneity.

The thirteenth problem is that the data are not normally distributed. This is a problem because the standard statistical tests assume normality. The fourteenth problem is that the data are not independent. This is a problem because the standard statistical tests assume independence.

The fifteenth problem is that the data are not stationary. This is a problem because the standard statistical tests assume stationarity. The sixteenth problem is that the data are not homogeneous. This is a problem because the standard statistical tests assume homogeneity.

The seventeenth problem is that the data are not normally distributed. This is a problem because the standard statistical tests assume normality. The eighteenth problem is that the data are not independent. This is a problem because the standard statistical tests assume independence.

The nineteenth problem is that the data are not stationary. This is a problem because the standard statistical tests assume stationarity. The twentieth problem is that the data are not homogeneous. This is a problem because the standard statistical tests assume homogeneity.

The twenty-first problem is that the data are not normally distributed. This is a problem because the standard statistical tests assume normality. The twenty-second problem is that the data are not independent. This is a problem because the standard statistical tests assume independence.

RESEARCHER: I believe
I've found the
answer to the

long-standing question
of whether dinosaurs
were warm-blooded or
cold-blooded. The
evidence is clear: they
were warm-blooded.

For centuries, scientists
have debated whether
dinosaurs were warm-
blooded like mammals
or cold-blooded like
reptiles. The debate
has been heated, with
each side presenting
evidence to support
their case. But now, the
answer is finally within
reach.

RESEARCHER:

After years of study, I
can confidently say

that dinosaurs were
warm-blooded. The
evidence is overwhelming.
I've analyzed the bones
of many different
species, and the results
are consistent: they

were warm-blooded.
This means they had
a high metabolism, could
maintain a constant
body temperature, and
were able to move
quickly and efficiently.
This is a major discovery.

It changes our
understanding of these
ancient creatures and
how they lived. It also
helps us understand
the evolution of mammals.
This is a significant
step forward in our
knowledge of dinosaurs.
I'm proud to be part of
this team that has
made this discovery.

The implications are
far-reaching. It tells us
that dinosaurs were
more like mammals
than we previously
thought. It also suggests
that the transition from
cold-blooded to warm-
blooded may have
occurred much earlier
than we believed.

RESEARCHER:
This is a landmark
discovery.

the 1990s, the number of people who have been killed in the conflict has risen sharply. In 1990, there were 100 deaths; in 1991, there were 1,000; in 1992, there were 10,000; and in 1993, there were 100,000.

There are many reasons for this increase in deaths.

One reason is that the conflict has become more violent. In the 1990s, there have been many more attacks on civilians than in the 1980s. This has led to a large number of deaths.

Another reason is that the conflict has spread to new areas. In the 1990s, the conflict has spread to areas that were previously peaceful. This has led to a large number of deaths.

A third reason is that the conflict has become more organized. In the 1990s, there have been many more organized attacks than in the 1980s. This has led to a large number of deaths.

There are also many other reasons for the increase in deaths. For example, the conflict has led to a large number of people being displaced from their homes. This has led to a large number of deaths.

The conflict has also led to a large number of people being killed by landmines. This has led to a large number of deaths.

There are many other reasons for the increase in deaths. For example, the conflict has led to a large number of people being killed by landmines.

The conflict has also led to a large number of people being killed by landmines. This has led to a large number of deaths.

There are many other reasons for the increase in deaths. For example, the conflict has led to a large number of people being killed by landmines.

The conflict has also led to a large number of people being killed by landmines. This has led to a large number of deaths.

There are many other reasons for the increase in deaths. For example, the conflict has led to a large number of people being killed by landmines.

The conflict has also led to a large number of people being killed by landmines.

There are many other reasons for the increase in deaths. For example, the conflict has led to a large number of people being killed by landmines.

the most common cause of the problem is a lack of understanding of the problem. The first step is to identify the problem and then to determine the cause. Once the cause is identified, the next step is to develop a solution. The solution should be based on the cause of the problem and should be designed to prevent the problem from recurring.

The second step is to implement the solution. This step involves putting the solution into practice and monitoring the results. If the solution is not working, it may be necessary to revise the solution. The third step is to evaluate the results. This step involves comparing the results of the solution to the original problem. If the solution has been successful, the problem has been solved. If the solution has not been successful, the problem has not been solved.

The fourth step is to document the solution. This step involves writing a report that describes the problem, the cause, the solution, and the results. The report should be written in a clear and concise manner and should be easy to read. The fifth step is to share the solution. This step involves sharing the solution with others who may be interested in the problem. This can be done by presenting the solution at a meeting or by writing an article about the solution. The sixth step is to follow up on the solution. This step involves checking back on the solution to see if it is still working. If the solution is still working, the problem has been solved. If the solution is not working, the problem has not been solved.

The seventh step is to prevent the problem from recurring. This step involves identifying the causes of the problem and taking steps to prevent them from happening again. This can be done by implementing controls or by changing the process. The eighth step is to review the solution. This step involves reviewing the solution to see if it was the best solution for the problem. If the solution was not the best solution, it may be necessary to develop a new solution. The ninth step is to conclude the problem-solving process. This step involves summarizing the results of the problem-solving process and stating the final conclusion.

The tenth step is to evaluate the problem-solving process. This step involves evaluating the problem-solving process to see if it was effective. This can be done by comparing the results of the problem-solving process to the original problem. If the problem-solving process was effective, the problem has been solved. If the problem-solving process was not effective, the problem has not been solved.

The eleventh step is to share the results of the problem-solving process. This step involves sharing the results of the problem-solving process with others who may be interested in the problem. This can be done by presenting the results at a meeting or by writing an article about the results. The twelfth step is to follow up on the results of the problem-solving process. This step involves checking back on the results of the problem-solving process to see if they are still valid. If the results are still valid, the problem has been solved. If the results are not valid, the problem has not been solved.

The final step is to conclude the problem-solving process. This step involves summarizing the results of the problem-solving process and stating the final conclusion. The final conclusion should be based on the results of the problem-solving process and should be easy to understand.

the 1990s, the U.S. economy was in a period of rapid growth, and the federal government was able to maintain a relatively low level of debt. However, the 2000s saw a period of economic stagnation, and the federal government's debt began to grow rapidly. This was due to a combination of factors, including the 2001 recession, the 2008 financial crisis, and the 2010s budget deficits.

The 2001 recession was a major factor in the increase in federal debt. The economy was in a period of slow growth, and the federal government was forced to increase its spending to stimulate the economy. This led to a large budget deficit, which was added to the existing debt. The 2008 financial crisis was another major factor. The federal government was forced to bail out the financial system, which led to a massive increase in debt. The 2010s budget deficits were also a major factor. The federal government was running a budget deficit every year from 2010 to 2019, which led to a continued increase in debt.
